

American Express Campus Challenge 2026

It's about Premier Card

Agenda

- Background of Campus Challenge
- Stages of Competition
 - Round1 – Measuring the Customer Profitability for Premier Product

Background

Let's see, what The American Express Campus Challenge 2026 is all about?

The **American Express Campus Challenge** is an analytics, strategy and product-based challenge for campus students. It's a platform to showcase your talent and compete with the best minds across India.

American Express India Centre of Excellence (CoE) is a two-decade-old establishment serving as an “analytical powerhouse” for American Express. Our Decision Science, Strategy, and Product teams across Risk, Fraud, and Marketing are the backbone of all data-driven decisions across the customer life cycle at American Express. How do you engage with a customer? Should a card be approved or declined? How much credit should be extended to the customer? Is it really the customer making the transaction – or is it a fraudster? To solve these problems, we leverage rich data and the next generation of AI and technology.

In this year's competition, we are looking for innovative minds to express their proficiency in data analytics, strategic thinking, and product innovation to solve real-world business problems.

What's in it for you?

Exciting **prizes** for the winners & top performers!

***Pre-Placement Interviews (PPIs)** for top performers!

Amex merchandise & participation certificates!

Card Member Attributes : Categories

- We have a total of ~23 attributes spread across different categories
- **Attribute Names will be masked and No PII will be shared**

CM spend & balance

- Industry level spends
- Revolve behavior

Benefit Usage

- No of lounge visits
- No of months Cab credits are utilized

Engagement

- No of calls to cancel premier card
- Website logins
- # of Cards held

Profile

- Tenure
- Riskiness score

Dataset Details

You are provided with a dataset having following details:

- Size – 500K records
- Contains only the Cardmember attributes
- Objective: Develop a profitability framework to rank order the cardmembers based on estimated profitability

Evaluation Criteria: Accuracy

- Accuracy measured as percentage of Actual Top 20% vs Top 20% profitable CMs identified
- Main dataset is divided into 2 parts randomly (70/30)

Public Leaderboard:

- Final Score will be Accuracy on 70% data. It will be live leaderboard rank ordered basis attained score and publicly available for students

Private Leaderboard:

- Final Score will be Accuracy on 30% data. It will be hidden leaderboard and published post R1 completion.

Round 1 Guidelines

- Participants will need to use existing variables in formulating their equation
- Participants must not use identifier variables in their solution
- Participants are not allowed to add new rows or alter the shared data
- The created solution must be run on all unique_identifiers
- Participants need to submit 1 file in Round 1
- Participants are required to download and follow exact templates of the submission files from Unstop website
- Participants should try to create an equation that is scalable in real world, keeping in mind the evaluation criteria
- Max submissions allowed per team in Round 1 are 50, leaderboard 1 would be public basis submission of File and team would be rank ordered basis max final score attained. Leaderboard 2 will be hidden and published at the end of Round 1
- Amex will be thoroughly evaluating all solutions to ensure integrity & guarding against any misuse or gaming
- Plagiarism of solutions will lead to disqualification for all involved teams
- The decision of all matters shall be binding and final. American Express shall not be obligated to provide any explanation or justification for its decisions.
